

Project Report

On

Campus Recruitment Management System

Introduction

Campus Selection System is a platform that provide interface between students and company.

System provides the list of suitable companies to the students, according to their educational qualification, experience and their preferences.

System provides the list of eligible students from a pool according to required skill for vacancy of company.

The aim is to provide services to both the Employer and the Graduate by recruiting Graduates according to the employer specifications. The main flow of the project goes as follows.

- The three main users involved in this system are
 1. Student
 2. Employer
 3. Administrator

Existing System

The company recruits graduates by maintaining manual records which involves many loop holes.

Drawbacks:

1. Redundancy:

Manual records tend to contain data which are redundant. This is because Normalization followed is consistent data base is missing feature in manual records.

2. Inconsistency:

Because of redundant data, there is no consistency in the data.

3. Time Consuming:

Maintaining each students and employees data with much number of fields is a tedious process and takes more time to retrieve back.

4. Improper Validation:

There are many cases where validation is to be performed between the existing data and yet to be entered data. Also, a graduate who appears for the interview and fails to succeed should not be reconsidered until a period of 3 months.

5. Tedious:

An organization data base goes through many numbers of updates each day which is hard to maintain in registers.

6. More HR:

In order to maintain the information of all the employees and students who applied for different jobs a special group of employees should be hired, which ultimately tends to the waste of resources.

Feasibility study

Whenever we design a new system, normally the management will ask for a feasibility report of the new system. The management wants to know the technicalities and cost involved in creation of new system.

- Technical feasibility
- Economic feasibility
- Physical feasibility

Technical feasibility:

Technical feasibility involves study to establish the technical capability of the system being created to accomplish all requirements to the user. The system should be capable of handling the proposed volume of data and provide users and operating environment to increase their efficiency.

For example, system should be capable of handling the proposed volume of data and provide users.

Economic feasibility:

Economic feasibility involves study to establish the cost benefit analysis. Money spent on the system must be recorded in the form of benefit from the system. The benefits are of two types:

Tangible benefits:

- Saving man labor to do tedious tasks saves time.
-

Intangible benefits:

- Improves the quality of organization.

Physical feasibility:

It involves study to establish the time responses of the new system being created. For e.g., if the new system takes more than one day to prepare crucial finance statement for the management, wherever it was required in an hour, the system fails to provide the same.

It should be clearly establish that the new system requirements in the form of time responses would be completely met with. It may call for increase in cost. If the required cost is sacrificed then the purpose of the new system may not be achieved even if it was found to be technically feasible.

Scope of the Project

The proposed system will affect or interface with the activities of graduate, employer and administrator.

The system works and fulfills all the functionalities as per the proposed system.

It will provide reduced response time against the queries made by different users.

The administrator will have a clear view of number of vacancies for a particular job, number of candidates applied and number of candidates selected.

All possible features such as verification, validation, security, user friendliness etc have been considered.

The different types of modules present in this project are

1. Admin
2. Company
3. User(Candidates/ Students)

Admin:

1. **Dashboard:** In this section, admin can see all detail in brief like Total Company Registered, Total User (Candidates) Registered and Total Vacancy Listed.
2. **Total Registered Company:** In this section, admin can view detail of registered company.
3. **Total Registered Users:** In this section, admin can view detail of users.
4. **Pages:** In this section, the admin can manage about us and contact us pages.
5. **Reports:** In this section admin can view how many company has been registered in particular period and also view how many vacancy counts listed by particular company in particular periods.

Admin can also update his profile, change the password and recover the password.

Company:

1. **Dashboard:** In this section, company can see all detail in brief like Total Number of application received, Total number of new applications, Total number selected application, Total number of rejected applications.
2. **Post Vacancy:** In this section, company can manage job posting(Add/Manage).
3. **Job Application:** In this section, company can view total new applications receive, total sorted applications and total rejected applications and company also have right to sort application and reject application and this selected and rejected message send to candidates.
4. **Reports:** In this section, company can view job posting in a particular periods and also see how many application has been received in a particular periods.

Company can also update his/her company profile, change the password, see the notifications of new applications received and recover the password.

User

- a. Guest User
- b. Registered User

Guest User

1. **Home Page:** User can see latest job posted on home page.
2. **About Us:** User can view about us page.
3. **Listed Jobs:** User can view total listed jobs.
4. **Contact us:** User can view contact us page.
5. **Candidates:** In this guest user can registered himself/herself.

Registered User

1. **Home Page:** User can see latest job posted on home page.
2. **About Us:** User can view about us page.
3. **Listed Jobs:** User can view total listed jobs.
4. **Contact us:** User can view contact us page.
5. **User Dashboard:** After click on this user can do following activities

- a. View his/her applied(Today's applied jobs, Yesterday applied jobs, Last seven days applied jobs and total applied jobs)
- b. **Fill Educations forms:** In this section, user can fill his/her own education details.
- c. **View Vacancy:** In this section, user view the vacancy of companies and apply the jobs.
- d. **History of Applied Jobs:** In this section, user can view his/her own applied job and see response of companies.
- e. **Reports:** In this sections, user can view his/her applied jobs in a particular periods.
- f. **Search Jobs:** In this section, user can search jobs according to job titles.

User can also update his/her own profile, change the password, see notification message of companies and recover the password.

Software & Hardware requirements

- ✓ Any Version of browser after Mozilla Firefox 4.0, Internet Explorer 6.0, chrome

Hardware requirements:

- ✓ Any processor after Pentium 4.
- ✓ Any version of Windows XP or later.
- ✓ Processor speed: 2.0 GHz
- ✓ RAM : 1GB
- ✓ Hard disk: 40GB to 80 GB

Software requirements:

- ✓ Database : MySQL
- ✓ Server : Apache
- ✓ Frontend : HTML
- ✓ Scripting Language : JavaScript
- ✓ IDE : Sublime
- ✓ Technology : PHP

System Design

- The entire system is projected with a physical diagram which specifies the actual storage parameters that are physically necessary for any database to be stored on to the disk. The overall systems existential idea is derived from this diagram.
- The relation upon the system is structure through a conceptual ER-Diagram, which not only specifies the existential entities but also the standard relations through which the system exists and the cardinalities that are necessary for the system state to continue.
- The content level DFD is provided to have an idea of the functional inputs and outputs that are achieved through the system. The system depicts the input and output standards at the high level of the systems existence.

A DFD does not show a sequence of steps. A DFD only shows what the different process in a system is and what data flows between them.

The following are some DFD symbols used in the project

External entities

Process: A transaction of information that resides within the bounds of the system to be module.

RULES FOR DFD:

 DATASTORE: A repository of data that is to be stored for use by one or more processes, may be as simple as buffer or queue or as a relational database

- Fix the scope of the system by means of context diagrams.
- Organize the DFD so that the main sequence of the actions reads left to right and top to bottom.
- Identify all inputs and outputs.
- Identify and label each process internal to the system with rounded circles.
- A process is required for all the data transformation and transfers. Therefore, never connect a data store to a data source or the destinations or another data store with just a data flow arrow.
- Do not indicate hardware and ignore control information.
- Make sure the names of the processes accurately convey everything the process is done.
- There must not be unnamed process.
- Indicate external sources and destinations of the data, with squares.
- Number each occurrence of repeated external entities.
- Identify all data flows for each process step, except simple Record retrievals.
- Label data flow on each arrow.

- Use details flow on each arrow.
- Use the details flow arrow to indicate data movements.
- There can't be unnamed data flow.
- A data flow can't connect two external entities.

LEVELS OF DFD:

The complexity of the business system means that it is responsible to represent the operations of any system of single data flow diagram. At the top level, an Overview of the different systems in an organization is shown by the way of context analysis diagram. When exploded into DFD

They are represented by:

- LEVEL-0 : SYSTEM INPUT/OUTPUT
- LEVEL-1:SUBSYSTEM LEVEL DATAFLOW FUNCTIONAL
- LEVEL-2: FILE LEVEL DETAIL DATA FLOW.

The input and output data shown should be consistent from one level to the next.

LEVEL-0: SYSTEM INPUT/OUTPUT LEVEL

A level-0 DFD describes the system-wide boundaries, dealing inputs to and outputs from the system and major processes. This diagram is similar to the combined user-level context diagram.

LEVEL-1: SUBSYSTEM LEVEL DATA FLOW

A level-1 DFD describes the next level of details within the system, detailing the data flows between subsystems, which makeup the whole.

Zero Level DFD

First Level DFD

2. Unified Modelling Language Diagrams (UML):

- The unified modeling language allows the software engineer to express an analysis model using the modeling notation that is governed by a set of syntactic semantic and pragmatic rules.
- A UML system is represented using five different views that describe the system from distinctly different perspective. Each view is defined by a set of diagram, which is as follows.

User Model View

- i. This view represents the system from the users perspective.
- ii. The analysis representation describes a usage scenario from the end-users perspective.

Structural model view

- ◆ In this model the data and functionality are arrived from inside the system.
- ◆ This model view models the static structures.

Behavioral Model View

- ◆ It represents the dynamic of behavioral as parts of the system, depicting the interactions of collection between various structural elements described in the user model and structural model view.

Implementation Model View

- ◆ In this the structural and behavioral as parts of the system are represented as they are to be built.

Environmental Model View

In this the structural and behavioural aspects of the environment in which the system is to be implemented are represented.

UML is specifically constructed through two different domains they are

- ◆ UML Analysis modelling, which focuses on the user model and structural model views of the system?
- ◆ UML design modelling, which focuses on the behavioural modelling, implementation modelling and environmental model views.

Use Case Diagrams Student

Use Case Diagrams Company

Use Case Diagrams Admin

ENTITY-RELATIONSHIP Diagrams

E-R (Entity-Relationship) Diagram is used to represents the relationship between entities in the table.

The symbols used in E-R diagrams are:

| <u>SYMBOL</u> | <u>PURPOSE</u> |
|---|------------------------------|
|  | Represents Entity sets. |
|  | Represent attributes. |
|  | Represent Relationship Sets. |
|  | Line represents flow |

Structured analysis is a set of tools and techniques that the analyst.

To develop a new kind of a system:

The traditional approach focuses on the cost benefit and feasibility analysis, Project management, and hardware and software selection a personal considerations.

DATABASE DESIGN

The data in the system has to be stored and retrieved from database. Designing the database is part of system design. Data elements and data structures to be stored have been identified at analysis stage. They are structured and put together to design the data storage and retrieval system.

A database is a collection of interrelated data stored with minimum redundancy to serve many users quickly and efficiently. The general objective is to make database access easy, quick, inexpensive and flexible for the user. Relationships are established between the data items and unnecessary data items are removed. Normalization is done to get an internal consistency of data and to have minimum redundancy and maximum stability. This ensures minimizing data storage required, minimizing chances of data inconsistencies and optimizing for updates. The MySQL Database has been chosen for developing the relevant databases.

Campus Recruitment Management System (CRMS) contains 8 MySQL tables:

tbladmin table Structure : This table store the admin login and personal Details.

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|---|--|--------------|-------------------|------------|------|---------------------|----------|----------------|
| 1 | ID  | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | AdminName | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 3 | UserName | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 4 | MobileNumber | bigint(10) | | | Yes | NULL | | |
| 5 | Email | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 6 | Password | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 7 | AdminRegdate | timestamp | | | Yes | current_timestamp() | | |

tbluser table Structure : This table store the student login and personal Details.

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|----|---|--------------|-------------------|------------|------|---------------------|----------|----------------|
| 1 | ID  | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | FullName | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 3 | Email | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 4 | MobileNumber | bigint(10) | | | Yes | NULL | | |
| 5 | StudentID | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 6 | Gender | varchar(120) | latin1_swedish_ci | | No | None | | |
| 7 | Address | mediumtext | latin1_swedish_ci | | No | None | | |
| 8 | Age | int(5) | | | No | None | | |
| 9 | DOB | varchar(120) | latin1_swedish_ci | | No | None | | |
| 10 | Image | varchar(120) | latin1_swedish_ci | | No | None | | |
| 11 | Password | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 12 | UserRegdate | timestamp | | | Yes | current_timestamp() | | |

tbleducation table Structure : This table store the student education details.

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|----|---|--------------|-------------------|------------|------|---------|----------|----------------|
| 1 | ID  | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | UserID | int(10) | | | Yes | NULL | | |
| 3 | SecondaryBoard | varchar(100) | latin1_swedish_ci | | Yes | NULL | | |
| 4 | SecondaryBoardyop | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 5 | SecondaryBoardper | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 6 | SecondaryBoardcgpa | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 7 | SSecondaryBoard | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 8 | SSecondaryBoardyop | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 9 | SSecondaryBoardper | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 10 | SSecondaryBoardcgpa | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 11 | GraUni | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 12 | GraUniyop | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 13 | GraUnidper | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 14 | GraUnicgpa | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 15 | PGUni | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 16 | PGUniyop | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 17 | PGUniper | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 18 | PGUnicgpa | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 19 | ExtraCurriculars | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 20 | OtherAchivement | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |

tblcompany table Structure : This table store the company details.

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|----|-----------------------|--------------|-------------------|------------|------|---------------------|----------|----------------|
| 1 | ID | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | CompanyName | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 3 | ContactPerson | varchar(100) | latin1_swedish_ci | | Yes | NULL | | |
| 4 | CompanyUrl | varchar(200) | latin1_swedish_ci | | Yes | NULL | | |
| 5 | CompanyAddress | mediumtext | latin1_swedish_ci | | Yes | NULL | | |
| 6 | MobileNumber | bigint(10) | | | Yes | NULL | | |
| 7 | CompanyEmail | varchar(200) | latin1_swedish_ci | | Yes | NULL | | |
| 8 | CompanyLogo | varchar(200) | latin1_swedish_ci | | Yes | NULL | | |
| 9 | Password | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 10 | CompanyRegdate | timestamp | | | No | current_timestamp() | | |

tblvacancy table Structure : This table store the company vacancy details.

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|----|------------------------|--------------|-------------------|------------|------|---------------------|----------|----------------|
| 1 | ID | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | CompanyID | int(10) | | | Yes | NULL | | |
| 3 | JobTitle | varchar(200) | latin1_swedish_ci | | Yes | NULL | | |
| 4 | MonthlySalary | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 5 | JobDescriptions | mediumtext | latin1_swedish_ci | | Yes | NULL | | |
| 6 | NoofOpenings | varchar(50) | latin1_swedish_ci | | Yes | NULL | | |
| 7 | JobLocation | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 8 | ApplyDate | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 9 | LastDate | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 10 | JobpostingDate | datetime | | | Yes | current_timestamp() | | |

tblapplyjob table Structure : This table store the vacancy application details .

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|---|---------------------|--------------|-------------------|------------|------|---------------------|----------|-------------------------------|
| 1 | ID | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | UserId | int(10) | | | Yes | NULL | | |
| 3 | JobId | int(10) | | | Yes | NULL | | |
| 4 | Resume | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 5 | ApplyDate | timestamp | | | Yes | current_timestamp() | | |
| 6 | Message | mediumtext | latin1_swedish_ci | | No | None | | |
| 7 | Remark | varchar(200) | latin1_swedish_ci | | No | None | | |
| 8 | Status | varchar(50) | latin1_swedish_ci | | Yes | NULL | | |
| 9 | ResponseDate | timestamp | | | No | 0000-00-00 00:00:00 | | ON UPDATE CURRENT_TIMESTAMP() |

tblmessage table Structure : This table store the company message against any vacancy application .

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|---|---|--------------|-------------------|------------|------|---------------------|----------|----------------|
| 1 | ID  | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | AppID | int(10) | | | Yes | NULL | | |
| 3 | Message | mediumtext | latin1_swedish_ci | | Yes | NULL | | |
| 4 | Status | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 5 | ResponseDate | timestamp | | | Yes | current_timestamp() | | |
| 6 | IsRead | char(1) | latin1_swedish_ci | | Yes | NULL | | |

tblpage table Structure : This table store the pages information .

| # | Name | Type | Collation | Attributes | Null | Default | Comments | Extra |
|---|---|--------------|-------------------|------------|------|---------|----------|-------------------------------|
| 1 | ID  | int(10) | | | No | None | | AUTO_INCREMENT |
| 2 | PageType | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 3 | PageTitle | varchar(200) | latin1_swedish_ci | | Yes | NULL | | |
| 4 | PageDescription | mediumtext | latin1_swedish_ci | | Yes | NULL | | |
| 5 | Email | varchar(120) | latin1_swedish_ci | | Yes | NULL | | |
| 6 | MobileNumber | bigint(10) | | | Yes | NULL | | |
| 7 | UpdationDate | timestamp | | | Yes | NULL | | ON UPDATE CURRENT_TIMESTAMP() |

Class Diagram:

The class diagram shows a set of classes, interfaces, collaborations and their relationships.

SYSTEM TESTING

SOFTWARE TESTING TECHNIQUES:

Software testing is a critical element of software quality assurance and represents the ultimate review of specification, designing and coding.

TESTING OBJECTIVES:

1. Testing is process of executing a program with the intent of finding an error.
2. A good test case design is one that has a probability of finding an as yet undiscovered error.
3. A successful test is one that uncovers an as yet undiscovered error.

These above objectives imply a dramatic change in view port.

Testing cannot show the absence of defects, it can only show that software errors are present.

There are three types of testing strategies

1. Unit test
2. Integration test
3. Performance test

Unit Testing:

Unit testing focuses verification efforts on the smallest unit of software design module. The unit test is always white box oriented. The tests that occur as part of unit testing are testing the module interface, examining the local data structures, testing the boundary conditions, execution all the independent paths and testing error-handling paths.

Integration Testing:

Integration testing is a systematic technique or construction the program structure while at the same time conducting tests to uncover errors associated with interfacing. Scope of testing summarizes the specific functional, performance, and internal design characteristics that are to be tested. It employs top-down testing and bottom-up testing methods for this case.

Performance Testing:

Timing for both read and update transactions should be gathered to determine whether system functions are being performed in an acceptable timeframe.

Output Screen of Project

Home Page

The screenshot shows the homepage of the Campus Recruitment Management System (CRMS). At the top, there is a navigation bar with links for Home, About Us, Listed Job, Contact, Candidates, Employers, and Admin. On the left, there is a sidebar with a logo and a 'Recent Jobs' section listing six job positions:

| Job Title | Company | Experience | Salary Range | Location | Published Date |
|--|------------------|------------|------------------------|-----------------------|----------------|
| WordPress Developer | Amazon India | 6+ | 20000-30000k USD/Month | Bangalore India | 30-08-2024 |
| Software Engineer, Senior Software Engineer, Module Lead | Religare Pvt Ltd | 10+ | 25k-35k/Month | H-321 Sector 4 Noida | 31-12-2024 |
| SQL Server Database Administrator | Religare Pvt Ltd | 25+ | 10k-25k/Month | H-321 Sector 4 Noida | 31-12-2024 |
| Software Engineer, Senior Software Engineer, Module Lead | HCL Pvt. Ltd | 25+ | 25k-35k/Month | Noida | 31-12-2024 |
| Software Developer(Java/ .Net/ PHP) | TCS pvt ltd | 3+ | 25k-35k/Month | H-476 Noida Sector 12 | 31-12-2024 |
| PHP Developer | HSBC | 2+ | 12564/-/Month | Noida | 31-12-2024 |

On the right side, there are three decorative images: a woman working on a laptop, a typewriter, and two women taking a selfie.

The screenshot shows the 'About Us' page of the CRMS. The background is a dark blue color with a faint image of hands interacting with a laptop. At the top, there is a heading 'Make a Difference with Your Online Resume!' and a 'Create Account' button. Below this, there are sections for 'About Us', 'Get in touch', and 'Quick Links'.

About Us

We are pleased to introduce ourselves as Spiderfocus, a professional placement services organization. We are a prominent Recruitment Firm offering out of the box Campus recruitment solutions to Institutes and Enterprises. With a vision to make our nation's future talents and young leaders, we have come up with a concept of Campus recruitment and promotion of institutes and colleges looking to place their fresh candidates.

Manage Vacancy

The screenshot shows a company dashboard for CRMS | Company. On the left, there's a sidebar with navigation links: Dashboard, Post Vacancy, Job Applications, and Reports. The main content area has a blue header bar with the title "Manage Vacancy". Below it, there's a search bar with "Show 10 entries" and a "Search:" input field. A table lists one job entry:

| S.NO | Job Title | Job Posting Date | Action |
|------|---------------------|---------------------|---|
| 1 | WordPress Developer | 2024-02-17 22:52:07 | Edit Delete |

At the bottom, it says "Showing 1 to 1 of 1 entries" and has navigation buttons for Previous, Next, and a page number indicator.

Update Vacancy

The screenshot shows the "Update Vacancy" page for a job titled "WordPress Developer". The page has a sidebar with the same navigation links as the previous screen. The main form contains the following fields:

- Job Information:** Job Title (WordPress Developer) and Monthly In-hand Salary (2000-3000k USD).
- Job Descriptions:** A text area containing "WordPress Developer", "Theme Customization", and "Plugin Development".
- Job Location:** Bangalore India.
- No of Opening:** 6.
- Apply From Date:** 17-02-2024.
- Last Date:** 30-08-2024.

A blue "Update" button is located at the bottom of the form.
